Great book to dip in and out of, good for traveling.

Dr Wilner has a wealth of experience of all of neurology, has spent time in France, and also a background as a medical missionary.

Therefore somewhat unusually for a US trained doctor, much of what he says strikes a refreshing cord for a British physician.

This should be read not just by neurologists, but by anyone who is interested in a neurological perspective on the ills of modern society.

It will also be enjoyed by the educated lay reader.
